PROJECT SUMMARY:

1) Project: Kommunity Shop

App Link: <https://play.google.com/store/apps/details?id=com.b2e.kommunityshop>

Project Name	Kommunity Shop
Technology Used	Flutter,
Role	UI Developer, Api Integration, Performance Testing
Team Size	2

Description:

✓ **Kommunity Shop (Mobile Application)**

1. Kommunity Shop is a Mobile Application for Online Shopping.
2. The Kommunity Shop project needs to create the shopping cart system to organize the products record and the other information about the customers. How customers can buy products from website can be recognized from their username and password. This Application is easy to access and user friendly. The customer can purchase the product very easily from the place near the shop in 5Km Radius by reading the details of product and by seeing the product image. Also, they can track the order status, Notification about the products will be received in the Application through Firebase Messaging.

2) Project: Axpert Flutter

App Link: https://play.google.com/store/apps/details?id=com.agile.axpertflutter_android

Project Name	Axpert Flutter
Technology Used	Flutter, Firebase, Google sign in, Biometric Authentication.
Role	UI Developer, Api Integration, Performance Testing
Team Size	7

Description:

✓ Axpert Flutter (Mobile Application)

1. "Axpert Flutter" is an Enterprise Software Platform that can be used to deploy complex transactional software. "Axpert Flutter" being a platform will be used for general distribution. Business Application will be hosted on our cloud servers which will be accessed through "Axpert" on mobile devices. Customer specific applications will be accessed using specific Client identification number and user credentials.

3) Project: Hindustan College Application

App Link: https://play.google.com/store/apps/details?id=com.b2e.hcas_staff

Project Name	Hindustan College Application For Staff
Technology Used	Flutter
Role	UI Developer, Api Integration, Performance Testing
Team Size	4

Description:

✓ Hindustan College Staff (Mobile Application)

1. Upon successful login using the staff ID and password, the system will display the staff profile and an overall dashboard. This dashboard will feature the staff attendance details, leave forms, department notifications, and information on student fee outstanding details, exam schedules, and upcoming events.
2. Furthermore, the dashboard will provide links to Hcas College's social media platforms, including Facebook, Instagram, YouTube, Twitter, and more. This integration aims to keep staff members connected with the college community through various online channels.

4) Project: Helpdesk

Project Name	Helpdesk
Technology Used	Flutter, Firebase
Role	UI Developer, Api Integration, Performance Testing
Team Size	3

Description:

✓ Helpdesk (Web)

1. The Helpdesk is a web-based Flutter Application where the user can raise the tickets.
2. We can organize Tickets, give assistance, and exchange information via text, Image, and Documents with users at a single point of contact.
3. User also will be notified for every action of ticket via Firebase Notifications and via email.

5) Project: Sparewares Application

App Link: <https://play.google.com/store/apps/details?id=com.vcw.sparewares>

Project Name	Sparewares
Technology Used	Flutter
Role	UI Developer, Api Integration, Performance Testing
Team Size	4

Description:

✓ Sparewares (Mobile Application)

1. **Sparewares** is a mobile application for online shopping of vehicle spare parts.
2. You can order vehicle parts through this application, which also includes features like adding items to a cart and a payment gateway.
3. Customers can buy products from the website, and their accounts can be recognized using their mobile numbers. This application is easy to access and user-friendly.

6) Project: Botswana Navigation Application

Project Name	Botswana Navigation
Technology Used	Flutter, Flutter Map, Google Api's.
Role	UI Developer, Api Integration, Map Integration
Team Size	5

Description:

✓ Botswana Navigation (Mobile Application)

1. In the Botswana navigation application, we have implemented a polyline feature to display the route from the current location to the destination.
2. The Botswana navigation application allows users to report events happening at their current location, such as medical emergencies, accidents, or fire incidents. When you click the *Search* menu icon, it displays options for nearby restaurants, hotels, and hospitals, as well as an option to add a place. If you select the *Restaurant* option, it shows the nearest restaurants based on your location.
3. If you select the *Add Place* option, you can submit your organization's name, type, and address to add location information to the map.
4. We have also implemented routing from the current location to the destination and enabled voice navigation to provide route guidance to users.
